We offer **Pilot Program** of watsonx BI → collaborate with Client Engineering team to improve certain key metrics

# Automated data enrichment and semantic modeling

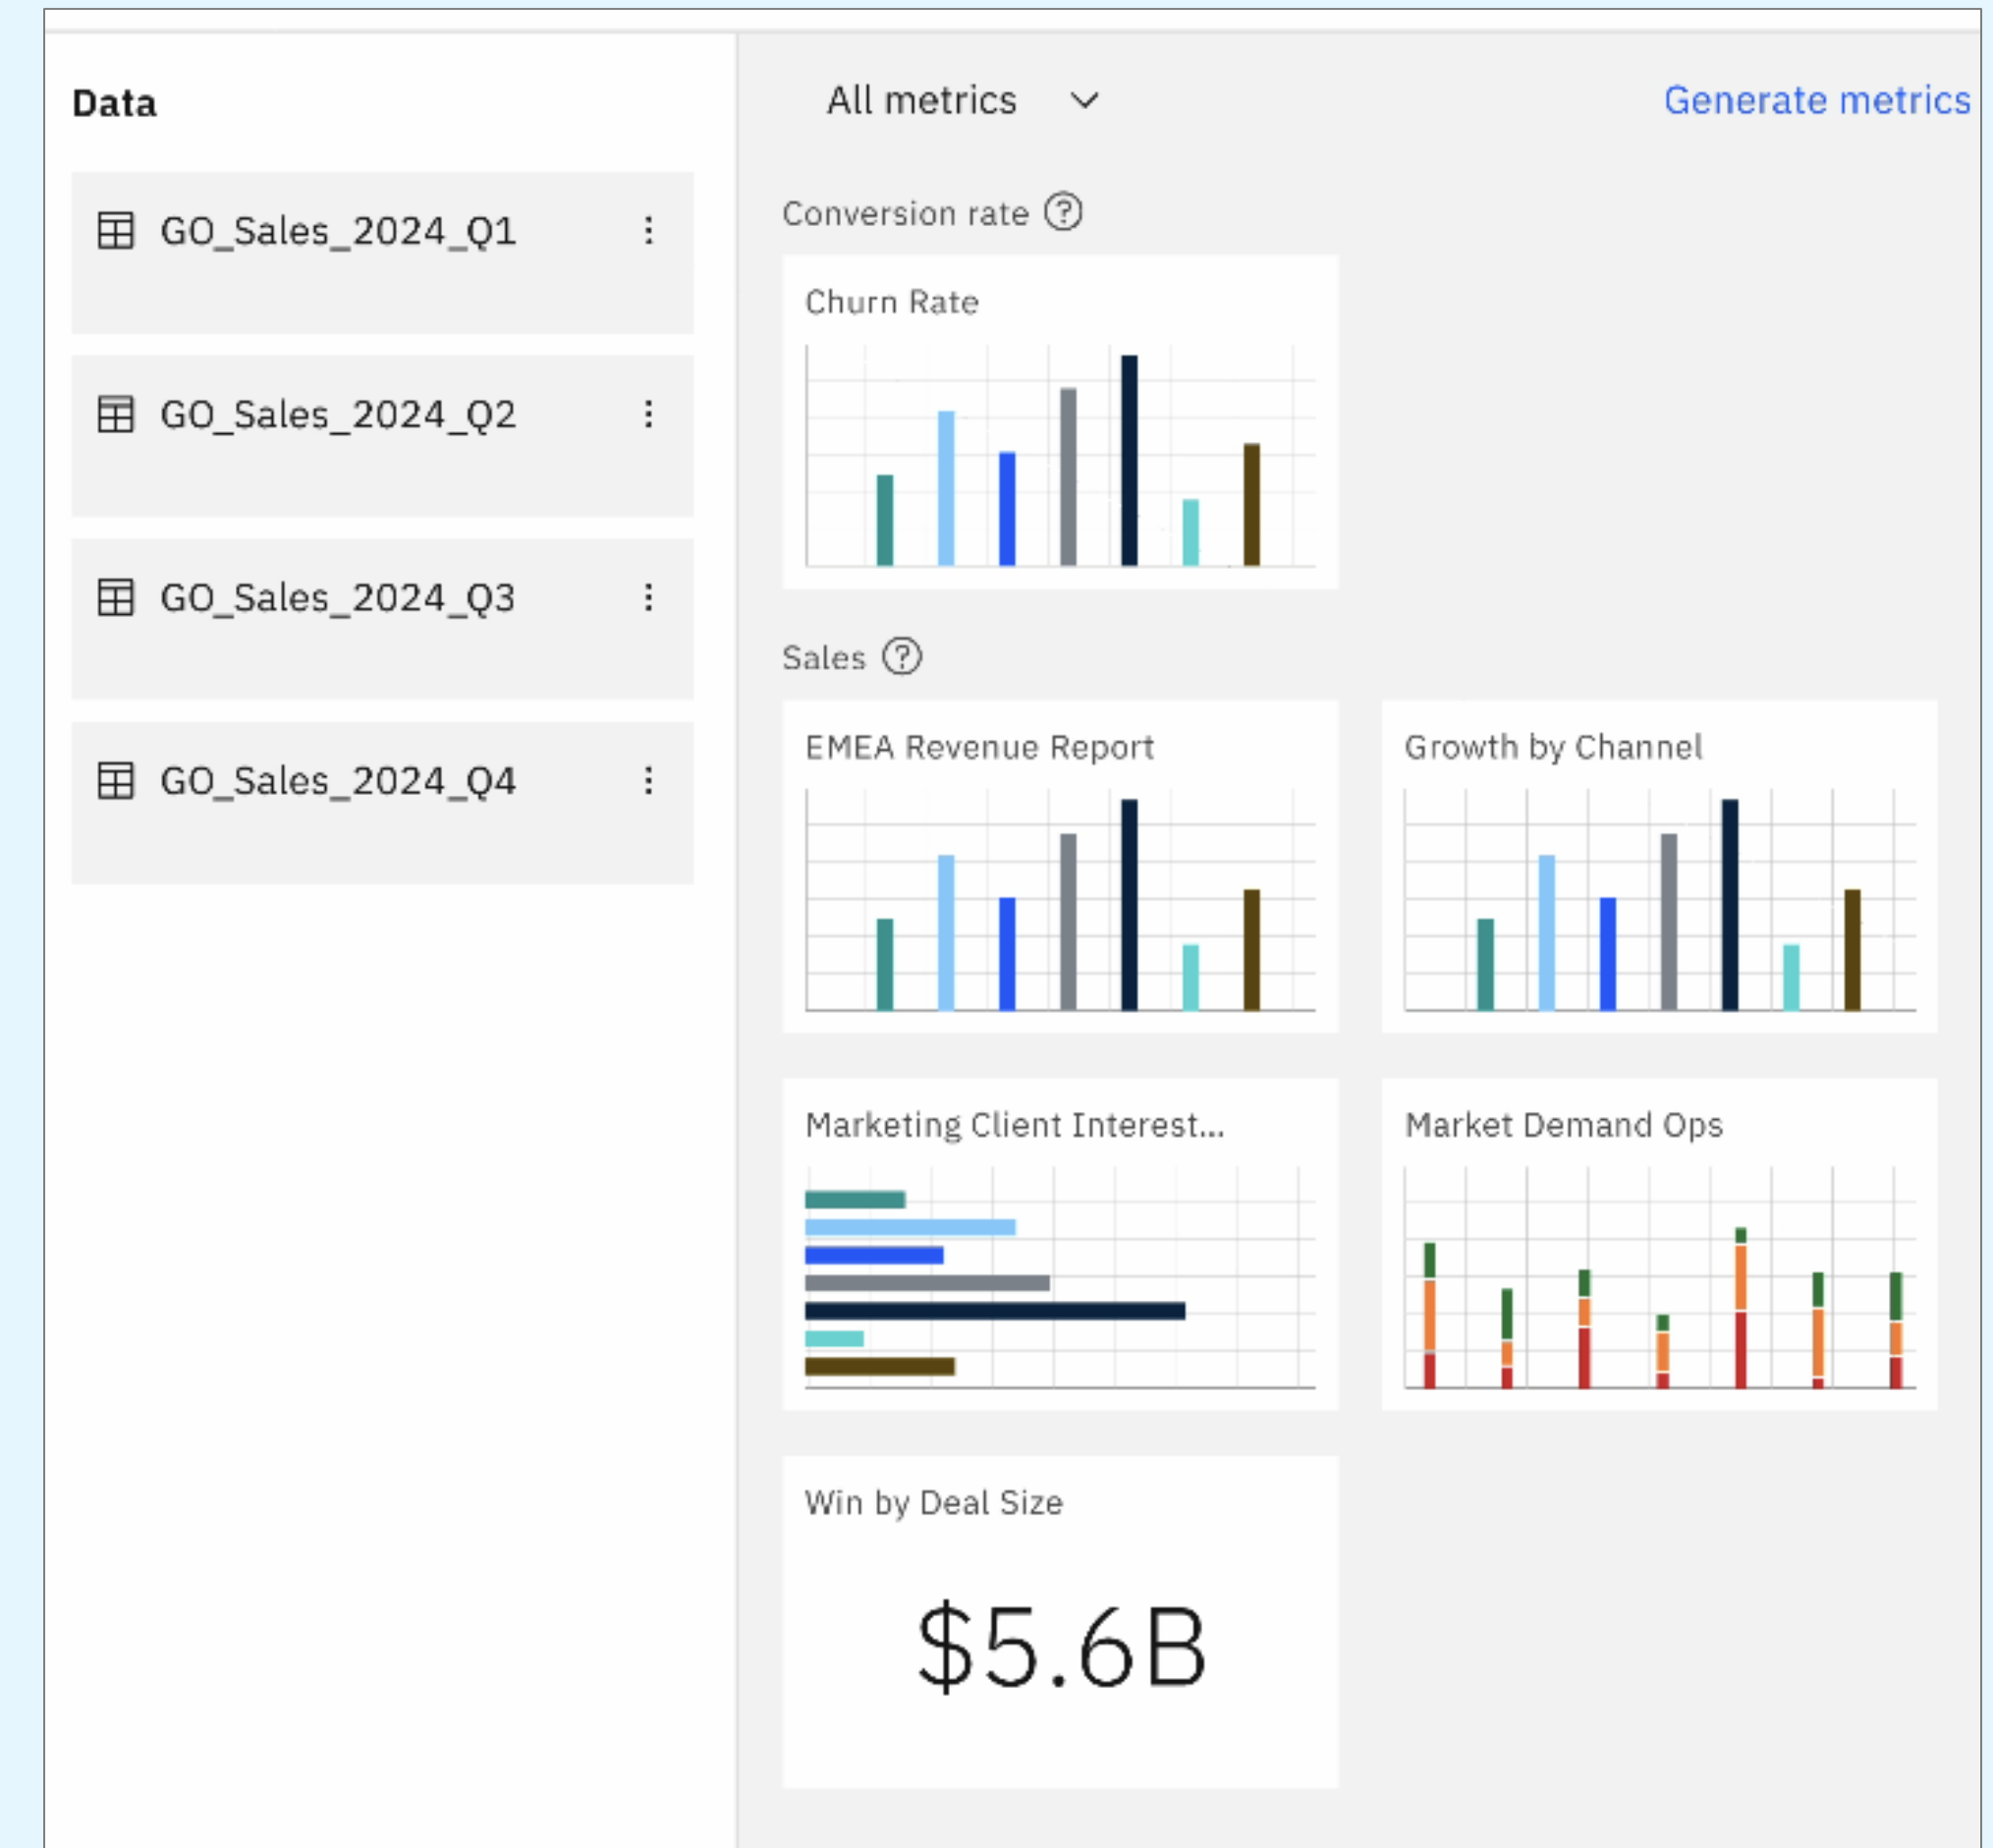

Automated modeling: save time by automatically profiling, enriching, and modeling data.

# Automated metrics generation

**Automated metrics:** Define, standardize, and share key metrics across teams to ensure consistent measurement and a unified view of performance

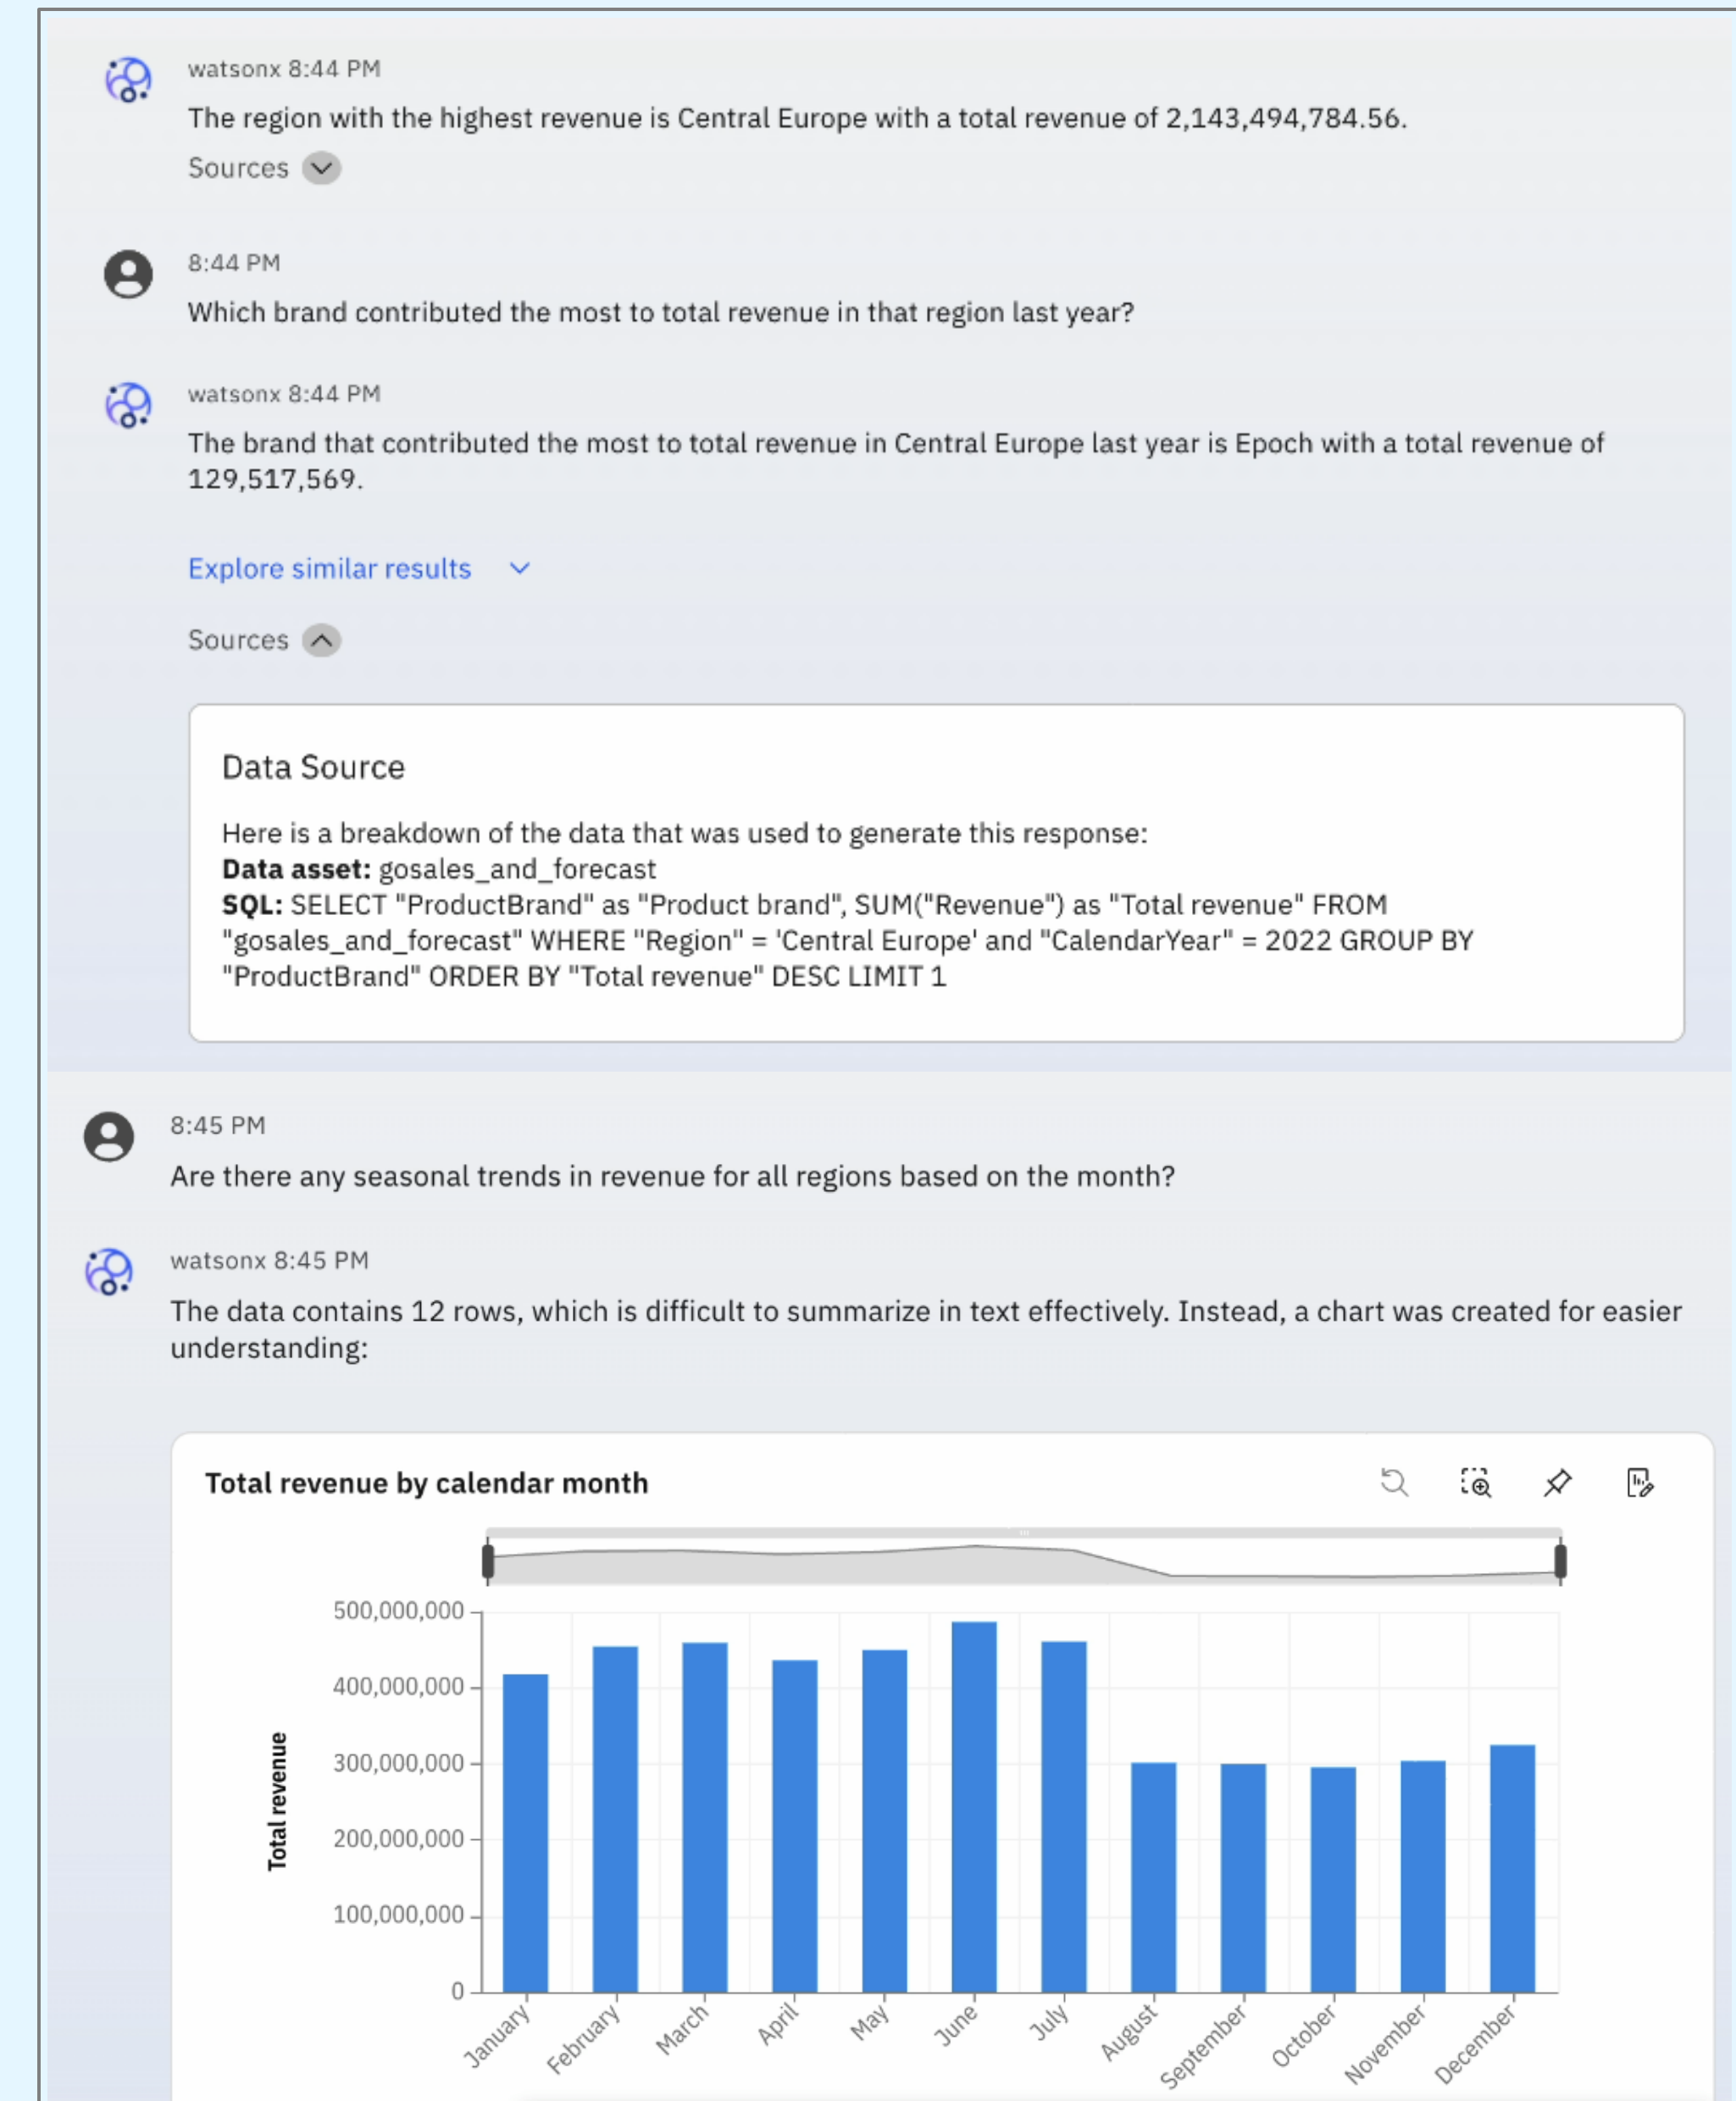

# Contextual, multi metaphor and transparent

**Contextual interaction:** uses profile and previous responses as context

**Multi-metaphor:** presents best options for user comprehensive (text, visualizations)

**Transparent:** system shows how it reached answers (data sources, SQL, etc.)

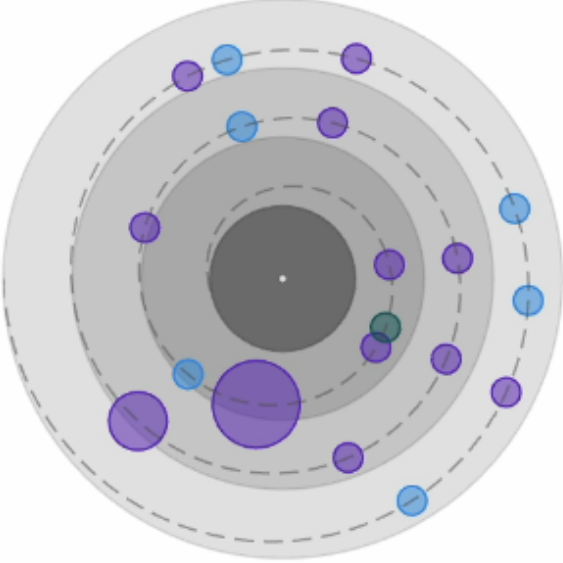

# Inquisitive and open to feedback

**Diagnostic:** goes beyond “what” to “why”

**Prescriptive\*:** from “why” to “how”

**Interested:** provide feedback to increase response quality

Inaccurate Lengthy Incomplete Delayed response Unclear Other

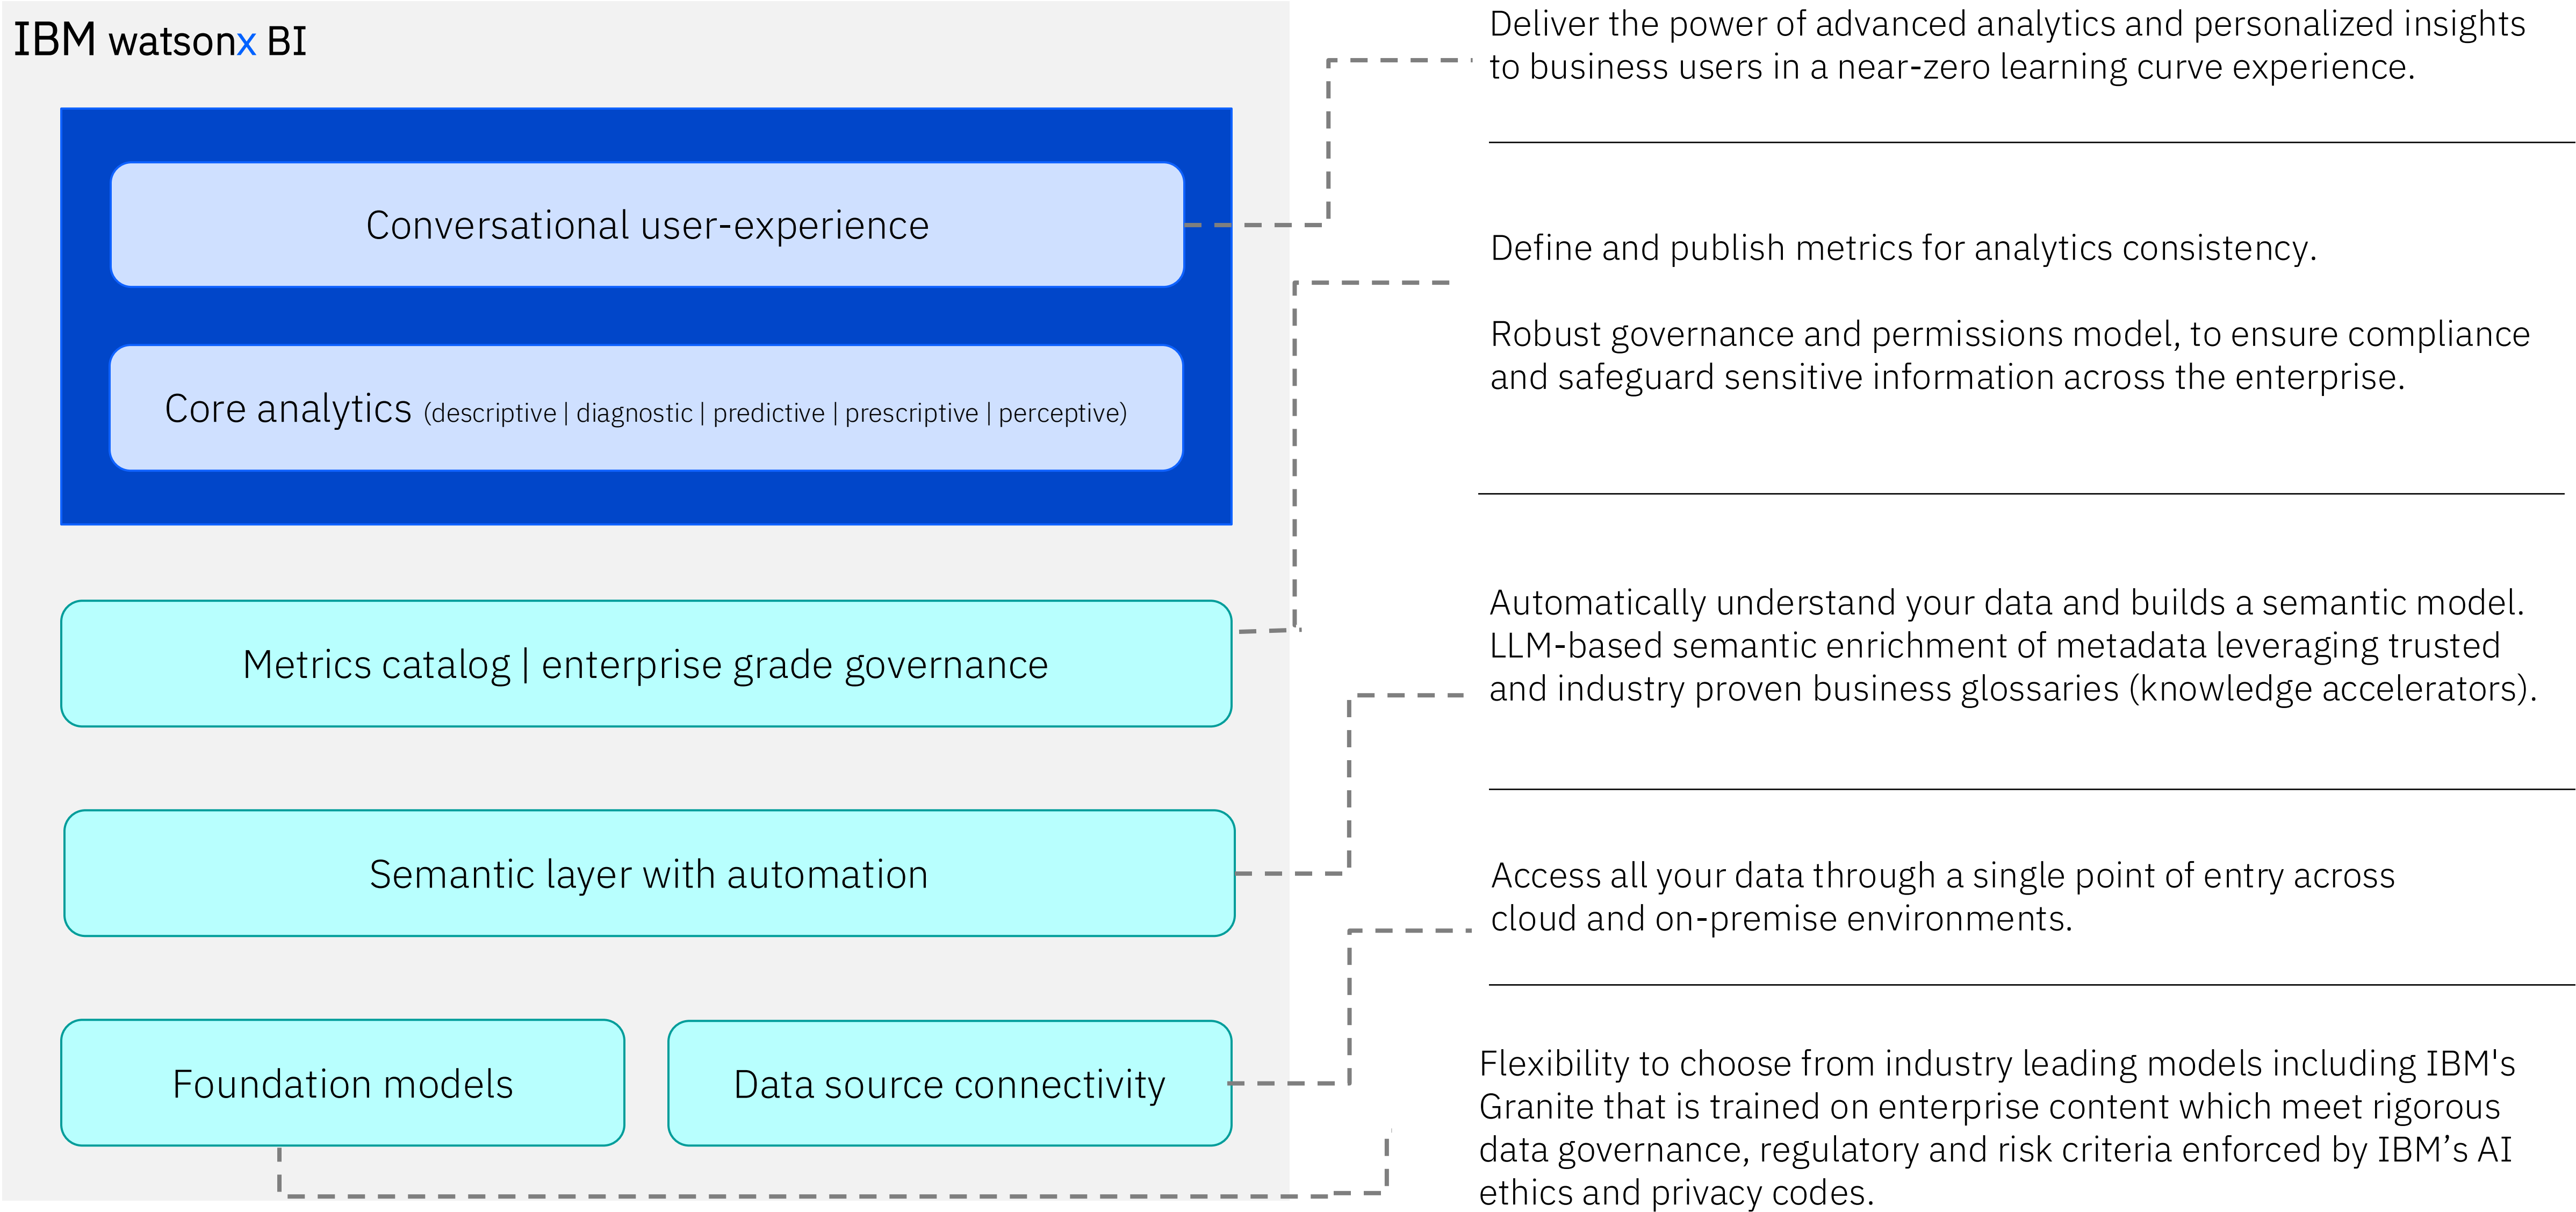

To better understand your feedback, a dedicated IBM team may review additional information (such as your prompt and the model output) to drive improvement of AI-powered features. Your content will not be used to train or enhance the AI model.

☐ I agree to IBM collecting information related to my feedback.

All data Ask BI Assistant

IBM **watsonx** BI is a full-stack BI solution that provides conversational analytics while allowing organizations to maintain data consistency, governance and composability

# watsonx BI

## Summary: Key features and benefits

### Conversational insight discovery

*Surface insights in seconds – know what’s happening, why it matters, and what to do next.*

#### Benefits:

- **Faster data driven decisions:** Surface insights in seconds and speed up decision-making by up to 90%.<sup>1</sup>
- **Boost adoption:** Increase BI tool usage by up to 50% by enabling natural-language exploration for non-technical users.

### Automatically assign meaning to data

*Automatically enriches data with meaning and creates consistent metrics for unified analytics.*

#### Benefits:

- **Save time prepping data:** Cut prep time by 95%<sup>2</sup> – from 2 weeks to 4 hours – with semantic automation and metrics generation
- **Consistent view of data across teams:** Get trusted insights grounded in business logic and governed metrics.

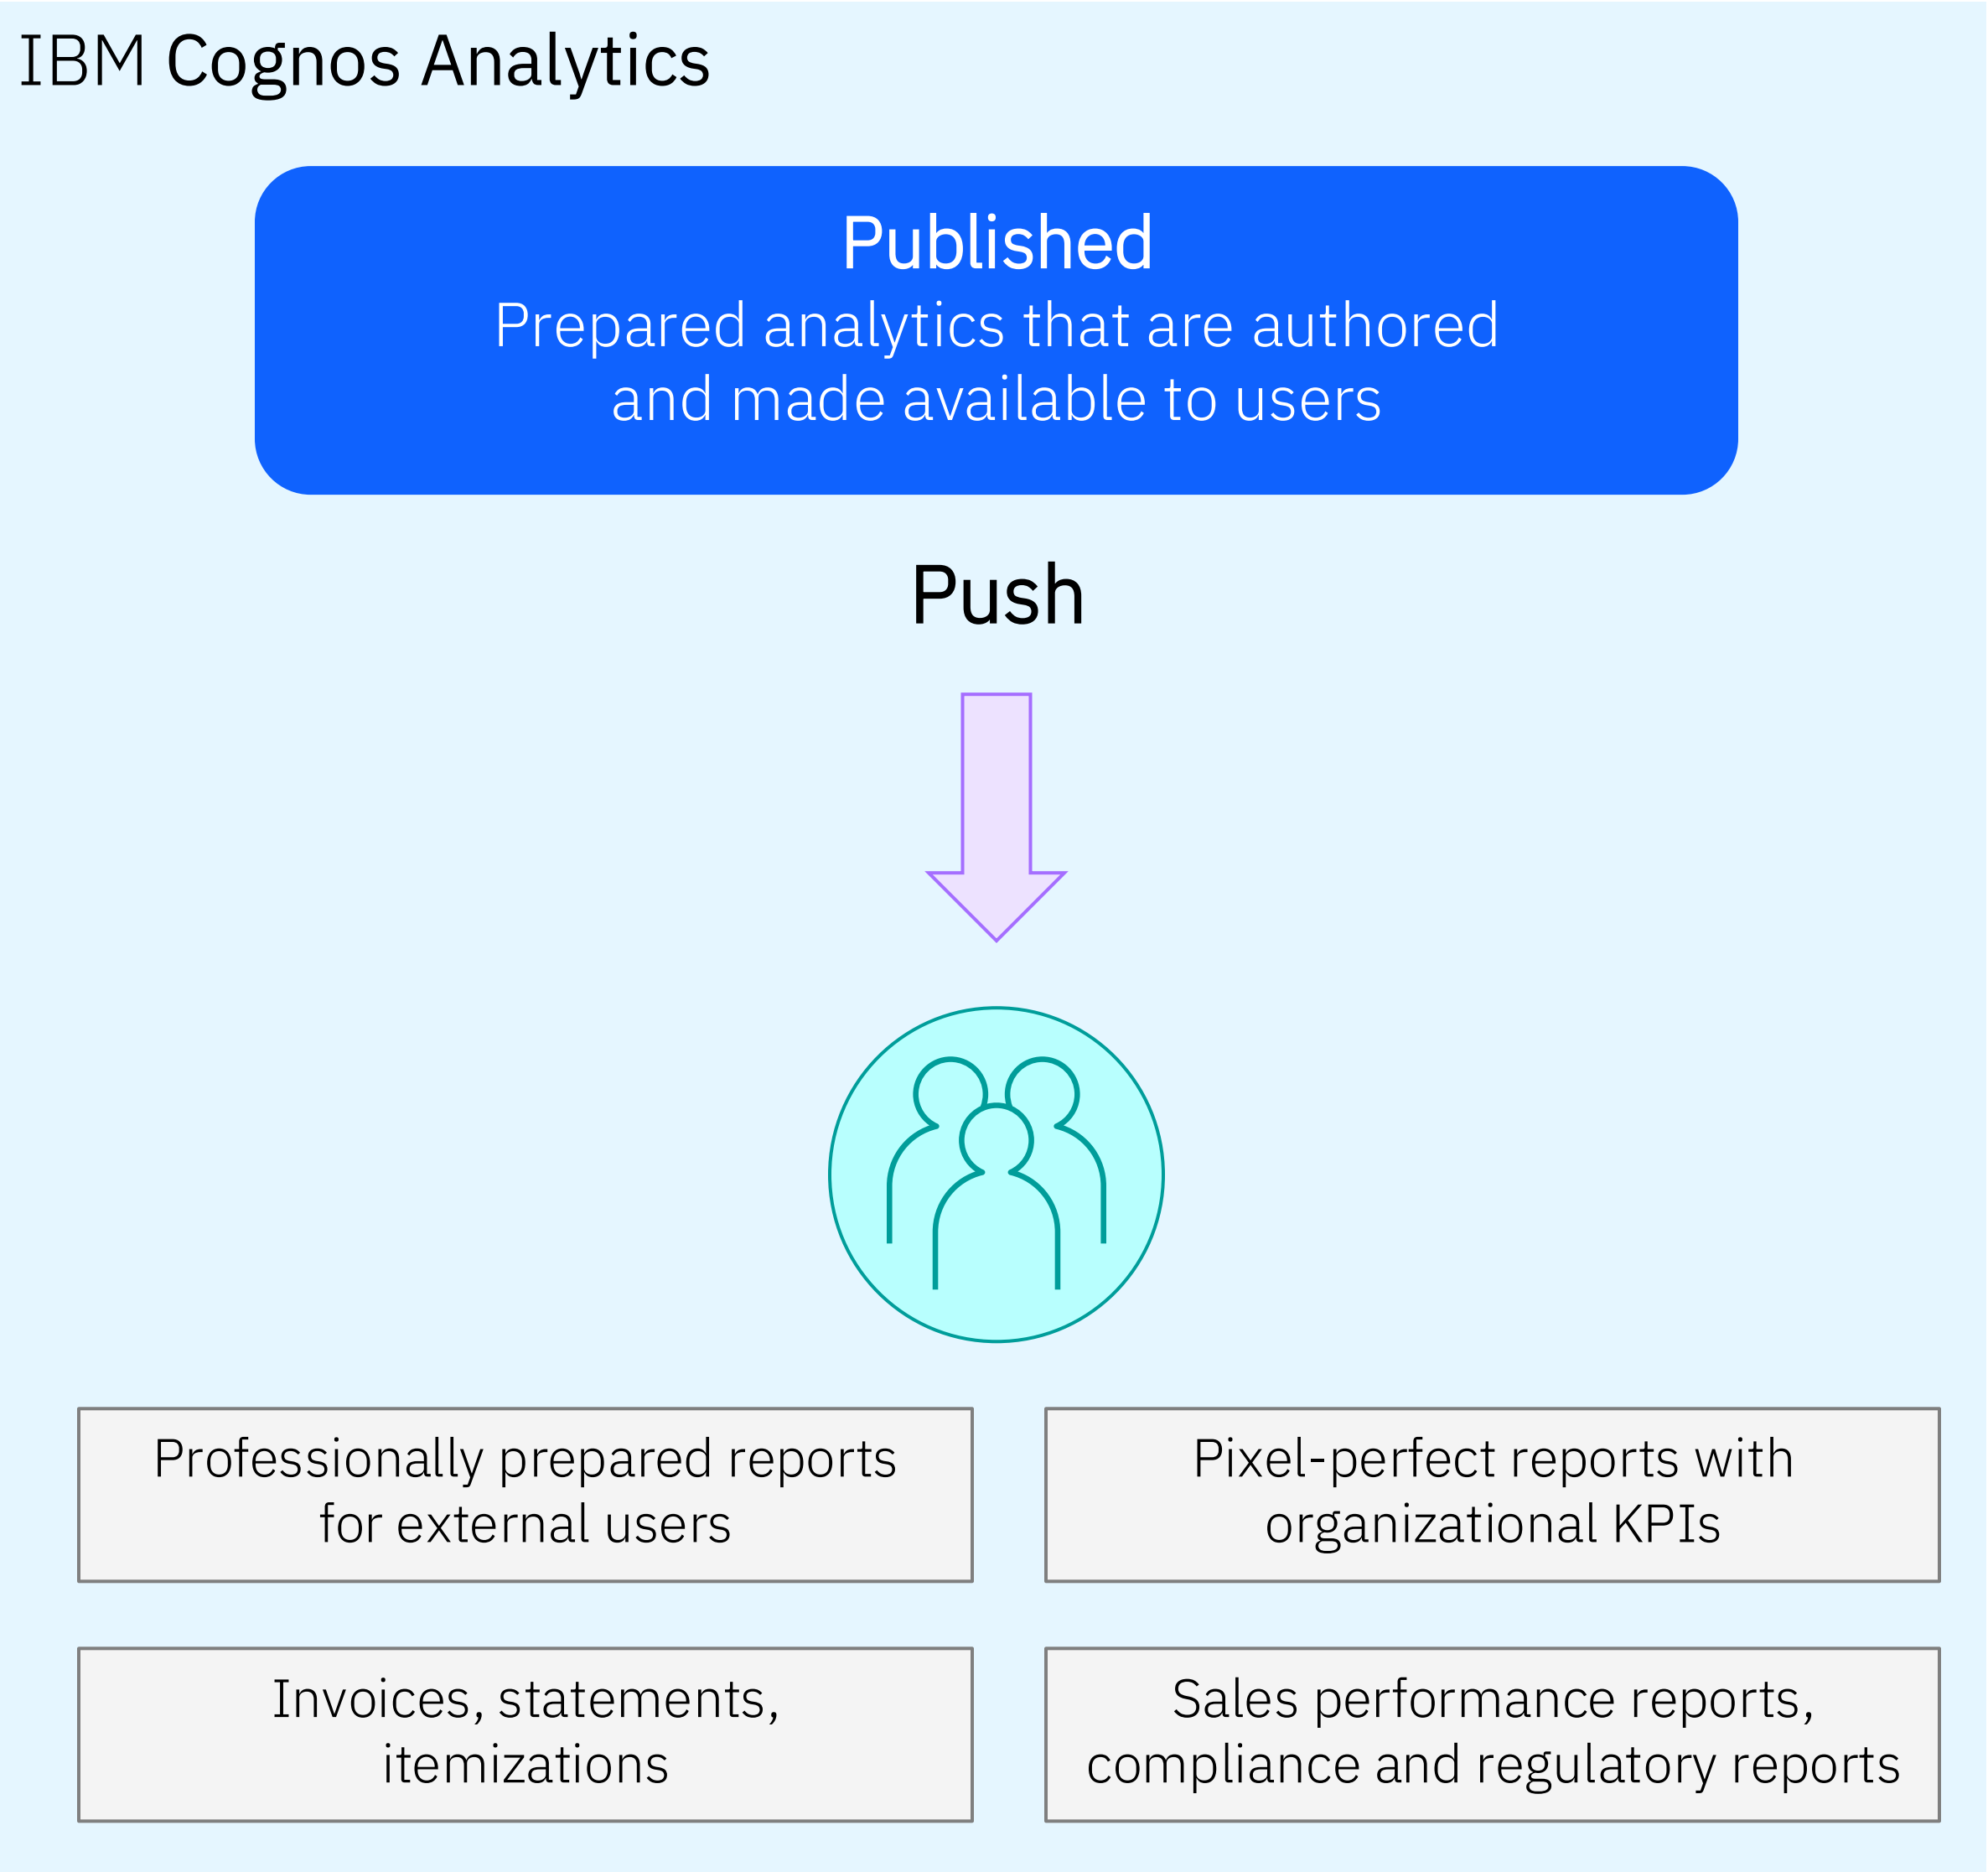

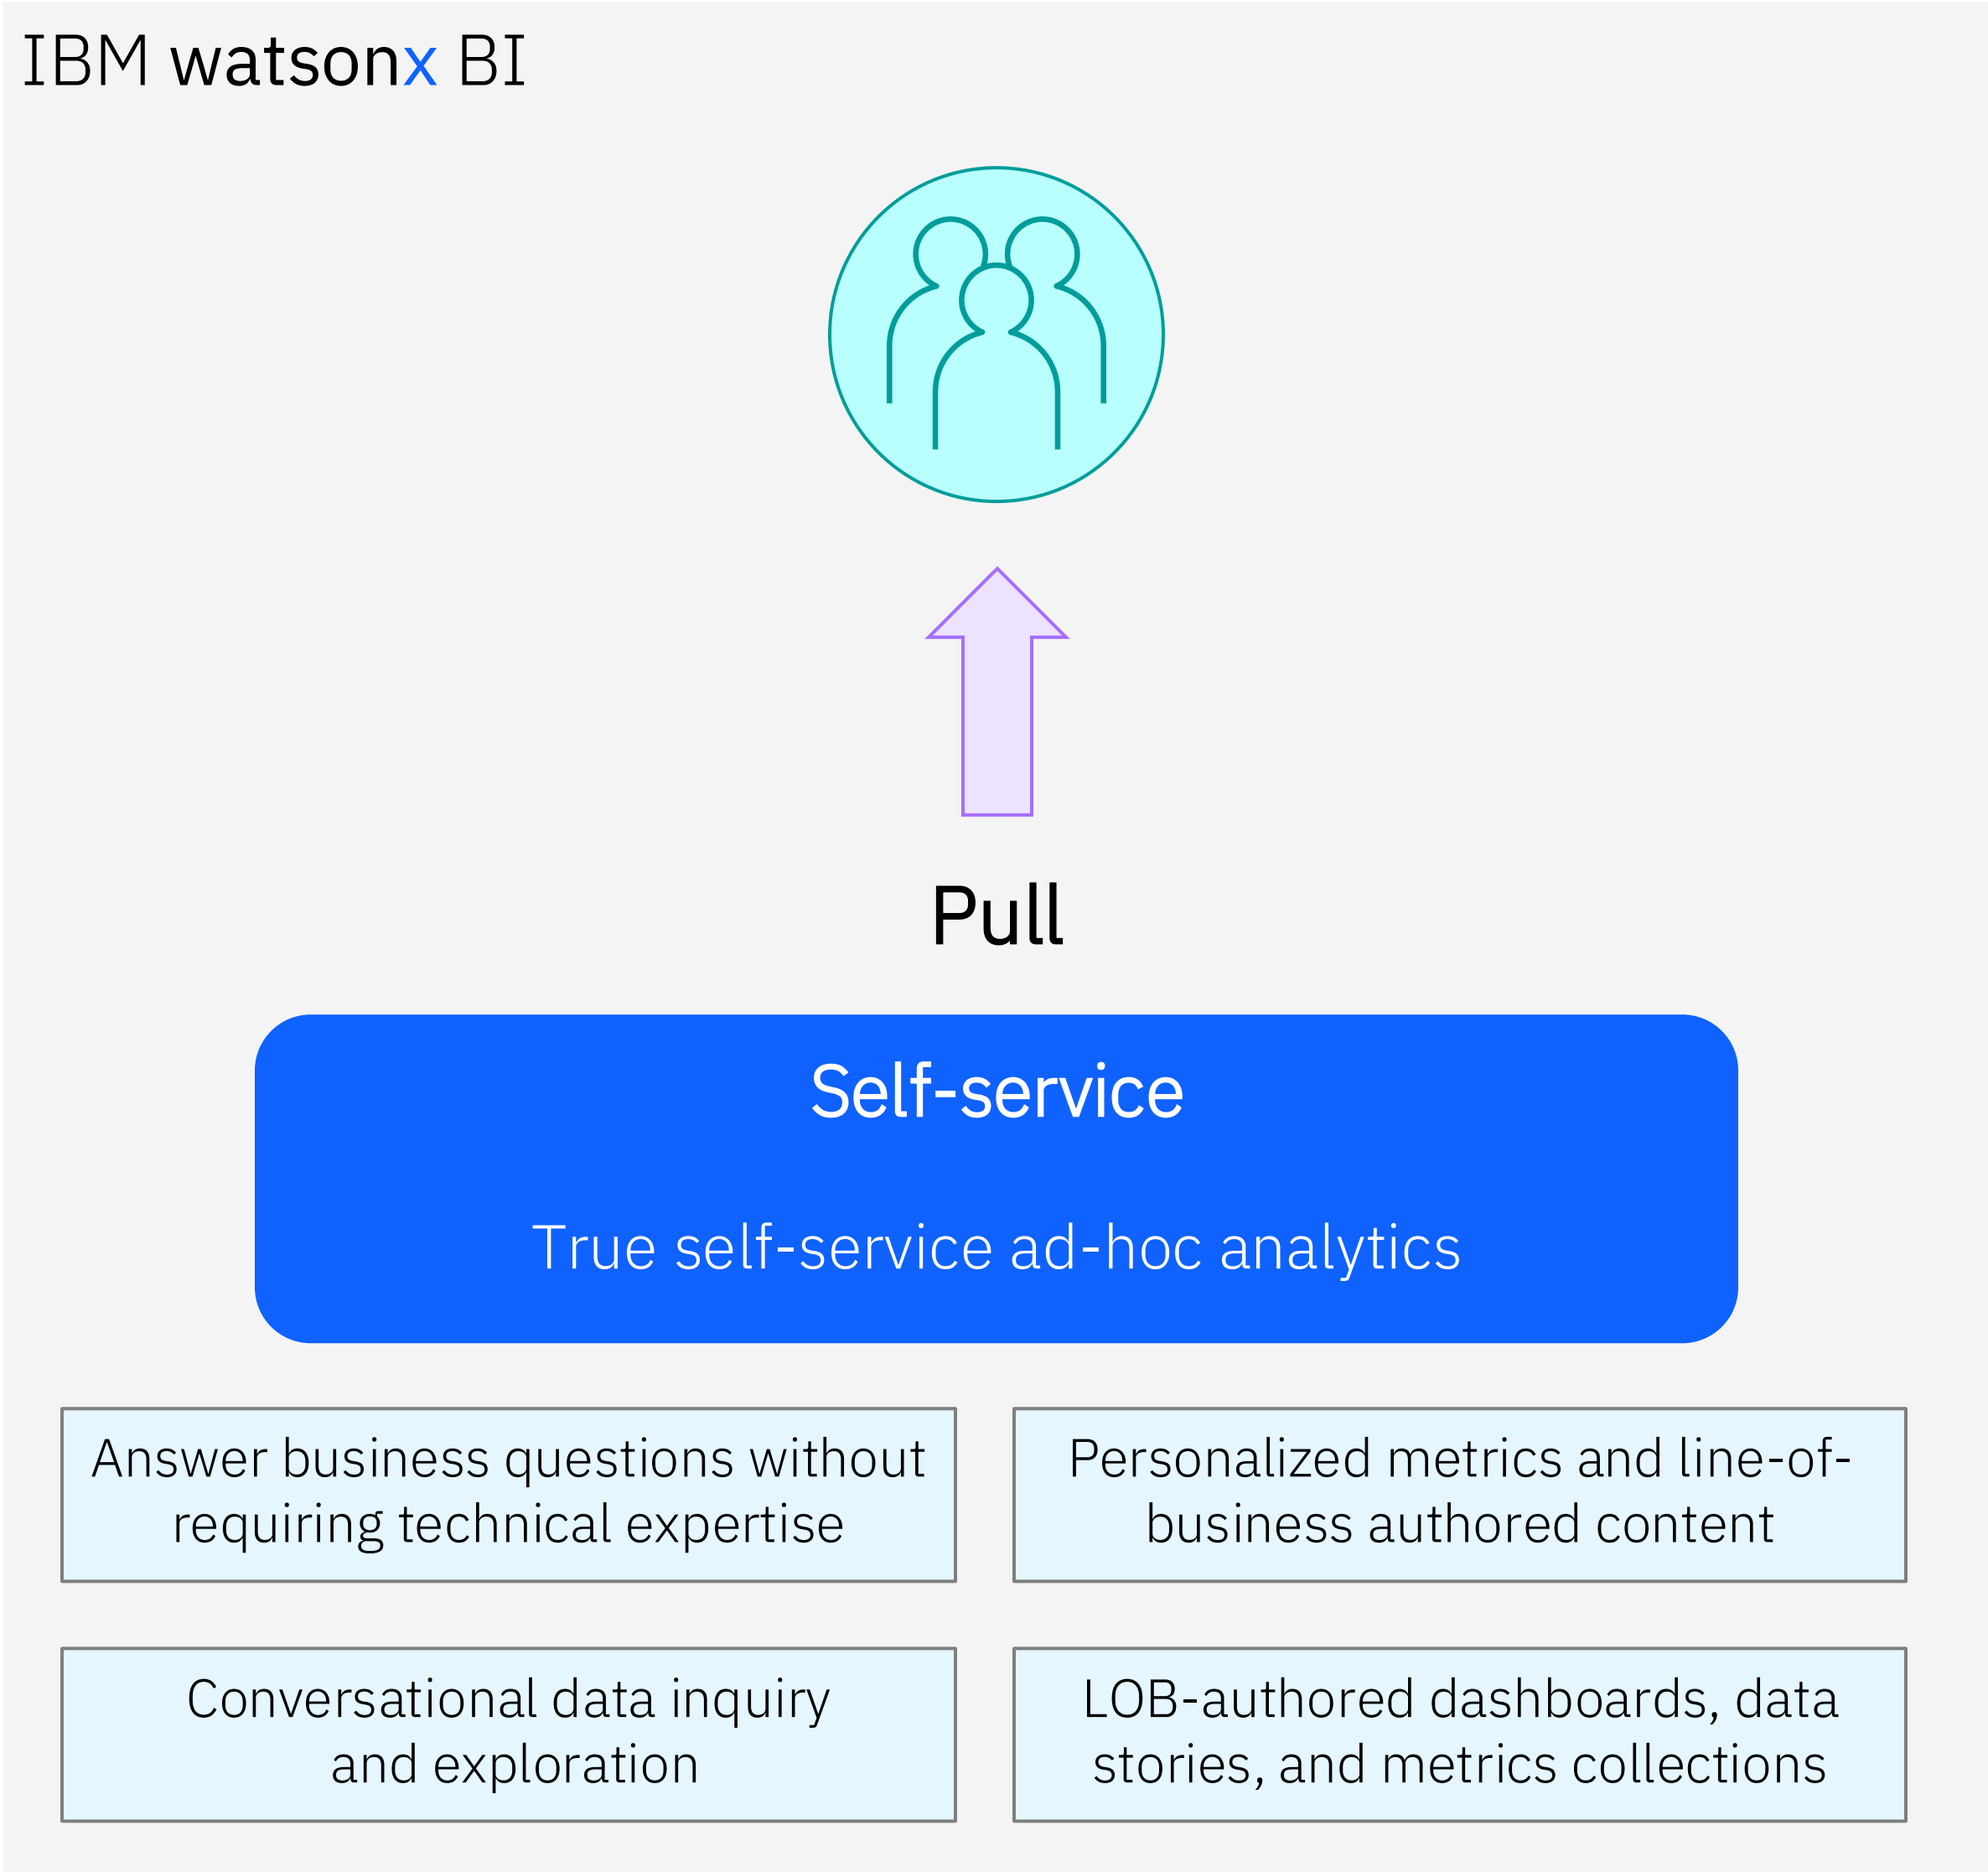

### Integrate with existing investments

*Connects with a clients existing lakehouse, workflow automation, and reporting tools.*

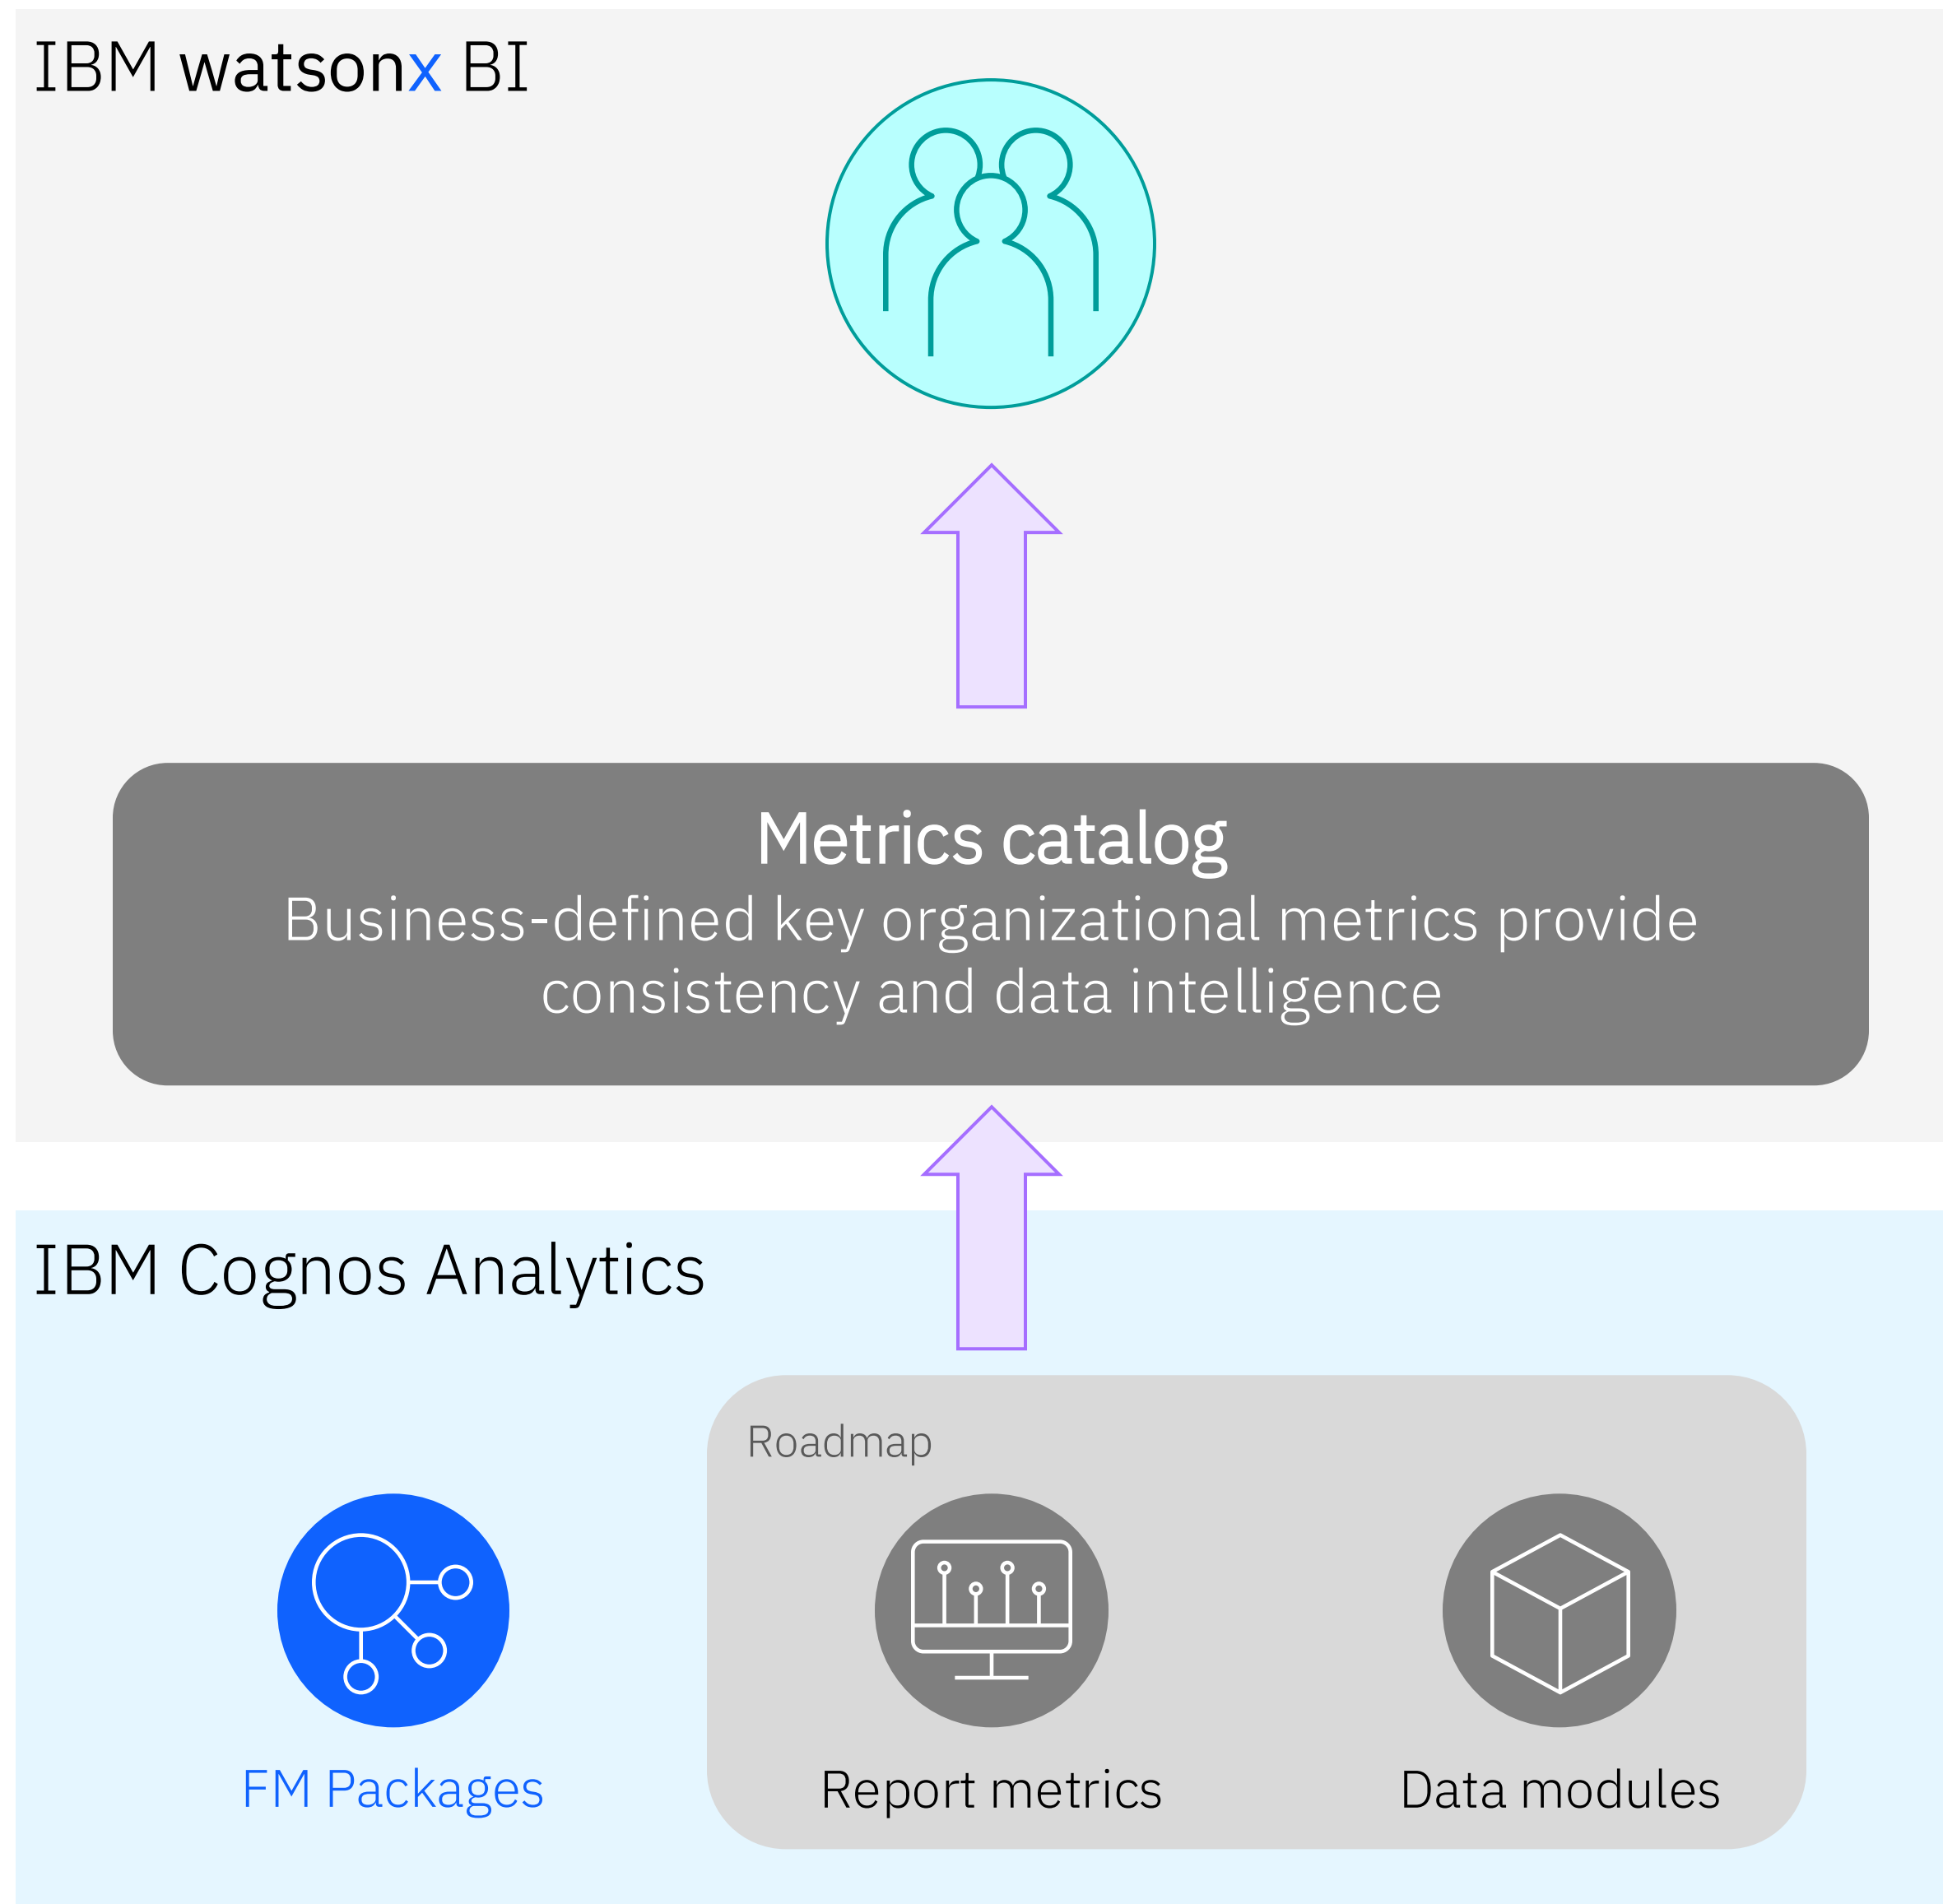

#### Benefits:

- **Increase ROI:** Leverage existing tools without disrupting current processes or costly overhauls
- **Faster time to insights:** Get up and running quickly by leveraging the metrics you already use.

watsonx BI and Cognos Analytics form an integrated BI solution that blends true self-service analytics with trusted enterprise reporting

Leverage **governed semantic models and metrics** defined in Cognos Analytics to provide trusted insights to every decision maker

Cognos Analytics data assets are rich with **valuable semantic information about business processes** and metrics.

Imagine making this information accessible to a new segment of line of business users with a **near-zero learning curve** experience?

**watsonx** BI allows users to access existing Cognos Analytics assets conversationally, unlocking new value from a clients' existing Cognos Analytics investment
